Hepatitis Protocol

[Printer Friendly PDF](#)

Overview

Hepatitis is liver inflammation. It is normally associated with one, or more viral infections, resulting in a persistent infection which erodes health and shortens life span. This material is state of the art.

- [Compiled Research;](#)
- [Liver Tutor Presentation](#)
- [Hepatitis Protocol Tutor](#)

The protocol develops in stages. Each stage adds additional support to the previous. Phases 1 & 2 are one month programs, Phase-3 is a six month program. Each phase is designed to restore strength before progressing to the next phase.

Do not advance to the next stage until your body has adjusted to the present stage. This means that you should feel no worse than you did when you started the present phase. You should notice a trend toward feeling better as you progress through the program.

- Phase-1 / Preparatory Immunological Support
- Phase-2 / Active Detoxification
- Phase-3 / Immune Escalation

You should plan for six months on the program.

Phase-1 / Preparatory Metabolic/Immune support

This protocol phase is designed to increase metabolic durability and to nourish the immune system in preparation for detoxification and increased immunological support during later phases of the protocol. It is a mild protocol designed to improve the immune system and metabolic competence.

This nutrient kit provides the supplements for Phase-1 of the program: [Hepatitis Phase-1 Kit](#)

Supplement	Wake	Break	Lunch	Dinner	Bed	Unit	
Immune Assist		2	2	2		Capsules	Hepatitis B Study Results
Colostrums Transfer Factors		2	2	2		Capsules	Support Immune Performance
L-Valine		1/2		1/2		Teaspoon	Aid in Liver regeneration with hepatitis. US patents: 6,660,771 , 5,916,921
Myers Cocktail	1 bottles weekly at convenience					Bottle	Support Methylation & liver detoxification with phospholipids and nutrients for system immunological support.

Phase-2 / Active Detoxification

This protocol is designed to reduce systemic toxicity. Individuals with hepatic inflammation are toxic. This protocol escalation:

- Increases detoxification with lipid agents to reduce the toxic accumulation throughout the body US Patents: [1](#), [2](#), [3](#);
- Increases immunological support with enzymes and rutosides [US 6,280,728](#);
- Adds antioxidant cofactors, sulfur and selenium in therapeutically significant quantities.

This link provides the nutrients for Phase-2 of the program: [Hepatitis Phase-2 Kit](#)

Supplement	Wake	Break	Lunch	Dinner	Bed	Unit	Purpose
Continue Phase-1							
PC Detox Oral		PC Detox HowTo See Titration Schedule					Use titration schedule. Patents for Phospholipids and Virus,
Intezyme	2				2	Capsules	Supply Trypsin & Bromelain. US 6,280,728 with rutosides.
Ginkgo Biloba	2				2	Capsules	Ginkgo Biloba extract powder for rutosides. US 6,280,728
OxyOil		2				Dropper	Provides Sulfur/Selenium as liver antioxidant to aid liver/kidney.

Phase-3 / Immune Escalation

Oral [glutathione](#) will support detoxification directly to support elevated toxin load from immunological escalation.

- Direct Glutathione is encapsulated in phospholipids and increases cellular glutathione availability;
- Systemic Hyperthermia

This link provides the nutrients for one month of Phase-3 of the program: [Hepatitis Phase-3 Kit](#)

Supplement	Wake	Break	Lunch	Dinner	Bed	Unit	Purpose
Continue Phase-1 and Phase-2 Supplements							
Liposomal Glutathione 2267		1.5 tsp				Teaspoons / day	Escalate detoxification pathway. Provides approximately 600 mg of glutathione to cells daily, equivalent to daily glutathione injection.
Silymarin		3		3		Capsules	Liver Cellular Antioxidant
OMST Hyperthermia System OMST Nutrient Kit 12 Pack		3x Weekly Oxygen Multistep Therapy Hyperthermia Immune Enhancement / HowTo					Enhance Immunological performance.
